

Document Management Policy

Orchid Retail Digital Transformation | Version 1.4 | Owner: Document Operations

Purpose

This policy defines how Orchid Retail teams should name, store, approve, archive, and reuse operational documents in CentralDocs. The goal is to reduce duplicate files, make search more reliable, and preserve source references for AI-assisted answers.

Naming convention

Use the format Team-Purpose-Date-Version. Example: Finance-VendorOnboarding-2026-05-v1.2.docx. Final files should avoid vague names such as final-final or latest-copy.

Generated documents should include a readable title and the source chat reference when possible, such as orchid-rollout-brief.md.

Storage rules

Store approved documents in the folder that matches their operating owner. Finance files belong in Finance & Vendors. Support answers belong in Customer & Support Signals or Document Operations depending on ownership.

Mock demo files are read-only. User uploaded and generated files can be moved, attached to chat, downloaded, or soft-deleted until the demo session expires.

Approval and source references

AI-generated answers should cite the CentralDocs references used. Managers should expand the References Used panel before relying on summaries for decisions.

Remote approvals must retain evidence in CentralDocs, especially when policy, vendor, or invoice documents are involved.

Archive and trash behavior

Deleted user files and folders move to Trash. They are hidden from search and chat retrieval but remain restorable until the session is cleared or expires.

Mock documents are never deleted by demo cleanup. Session-created S3 objects and MongoDB records are hard-deleted only during clear session or expiry cleanup.

Area	Rule	Related CentralDocs behavior
Naming	Team-Purpose-Date-Version	Improves retrieval titles and references
Storage	Use owner folder	Folder can be attached to chat
Approval	Preserve evidence	References Used panel supports review
Trash	Soft delete first	Excluded from RAG until restored
